PROFESSIONAL SUMMARY

Backend engineer with 3+ years of hands-on delivery in Java and Spring Boot services, Linux-based operations, and production reliability. I build and operate backend systems end-to-end, from API design and implementation to CI/CD and incident response. Delivered measurable outcomes including deployment failure rate reduction from 5% to 0%, incident analysis lead time reduction from 40 minutes to 12 minutes, and recurring error reduction by 30%. Strong fit for Java backend development roles that require stable server operation, structured problem solving, and practical ownership.

CORE COMPETENCIES

Java Backend Development

Spring Boot

Linux Server Operations

REST API Design

System Reliability

CI/CD Automation

Redis JWT OAuth2

Batch and Idempotency

WORK EXPERIENCE

NCELL - DataForge 2026.01 - Present

Backend Engineer | Java, Spring Boot, Redis, Elasticsearch, MySQL

- Developed Java and Spring Boot backend services in a closed network enterprise environment for overtime workflow and approval APIs.
- Implemented Elasticsearch failure detection and automatic DB fallback to keep service continuity during latency and timeout incidents.
- Unified Elasticsearch and DB response schemas to preserve authorization scope, sorting, and pagination consistency.
- Designed stateless authentication with JWT and Redis TTL plus atomic operations for token revocation consistency.

NCELL - SMIP Maintenance 2025.01 - 2025.12

Backend Engineer | Java, Spring Boot, JUnit5, Mockito

- Standardized exception handling and validation policies across APIs through a shared backend error-handling layer.
- Added regression-focused test coverage with JUnit5 and Mockito for stable maintenance and safer refactoring.
- Reduced incident analysis lead time from 40 minutes to 12 minutes and lowered recurring error rate by 30%.

Hecto - AI and Development Team 2023.10 - 2024.07

Backend Engineer | Java, Spring Boot, Docker, GitLab CI/CD

- Built and operated backend services and release pipelines using Java, Spring Boot, Docker, and GitLab CI/CD.
- Standardized staging and deployment verification with Nginx-based flow to reduce environment drift.
- Cut release lead time from 1 hour to 25 minutes and reduced deployment failures from 5% to 0%.

NCELL - Prism 2026.02 - Present

Backend Engineer | Python, Postgres, Airflow

- Migrated a legacy Java FTP batch to Python/Airflow with rerunnable, idempotent processing states.
- Designed processing state management (PROCESSING, DONE, FAIL) to prevent duplicates and misses.

PROJECTS

VoiceLink - Real-time Matching and Calling Service

Solved matching race conditions and ghost session issues in a multi-node service using ordered cancellation and multi-step consistency checks.

Tech: Java, Spring Boot, Redis, LiveKit, Docker, CI/CD

SmartQ - Internal Search Service

Improved document QnA quality from 60% to 80% and reduced answer wait time from 5 minutes to 1 minute with production backend integration.

Tech: Java, Spring Boot, OpenAI API, LangChain

EDUCATION

Designed and implemented a mock e-commerce platform with Spring Boot, focusing on architecture and module trade-offs.

CERTIFICATIONS

No formal certifications listed.

SKILLS

Languages: Java, Python **Backend:** Spring Boot, REST API **Data:** MySQL, Postgres, Redis, Elasticsearch **Security:** JWT, OAuth2
Operations: Linux, Docker, GitLab CI/CD, Airflow **Testing:** JUnit5, Mockito
