PROFESSIONAL SUMMARY

Backend engineer with 3+ years of experience in Java and Spring Boot, focused on ERP-like business systems, process improvement, and stable operations. I own the full lifecycle from design and implementation to deployment and operations, with measurable outcomes in data integrity and incident reduction. Proven impact includes deployment failure reduction from 5% to 0%, incident analysis lead-time reduction from 40 minutes to 12 minutes, and recurring data consistency issue reduction from monthly 3 cases to 0. Strong match for roles that combine system development, process innovation, and data integrity in enterprise environments.

CORE COMPETENCIES

Java and Spring Boot

ERP System Operations

Process Innovation

Data Integrity

Business Workflow Design

Linux Server Operations

Incident and Bug Handling

CI/CD and Reliability

WORK EXPERIENCE

NCELL - DataForge2026.01 - Present

Backend Engineer | Java, Spring Boot, Redis, Elasticsearch, MySQL

- Improved enterprise business workflow reliability by implementing backend services for overtime management in a closed network environment.
- Built automatic fallback from Elasticsearch to DB to maintain service continuity and preserve data integrity during search incidents.
- Unified response schema and authorization behavior across search paths to reduce inconsistency and user-facing operation errors.

NCELL - SMIP Maintenance2025.01 - 2025.12

Backend Engineer | Java, Spring Boot, JUnit5, Mockito

- Led process standardization by introducing a shared exception handling and validation policy across APIs.
- Cut incident analysis lead time from 40 minutes to 12 minutes and reduced recurring errors by 30%.
- Improved maintainability and cross-team handoff quality through documented state flow and test-backed refactoring.

Hecto - SafeCash MyData Team2022.08 - 2023.09

Backend Engineer | Java, Spring Boot, Crontab

- Automated recurring synchronization and batch operations that were previously manual, reducing operational overhead.
- Introduced execution history and result logging to detect anomalies early and support reliable correction workflows.
- Reduced monthly data consistency issues from 3 cases to 0 through operational and data quality improvements.

Hecto - AI and Development Team2023.10 - 2024.07

Backend Engineer | Java, Spring Boot, Docker, GitLab CI/CD

- Built stable backend release processes with GitLab CI/CD and Docker for production service operation.
- Reduced release lead time from 1 hour to 25 minutes and deployment failures from 5% to 0%.

PROJECTS

VoiceLink - Real-time Matching and Calling Service

Solved stale state and ghost session issues in distributed matching flow by enforcing ordered state transitions and Redis-based shared state validation.
Tech: Java, Spring Boot, Redis, LiveKit, Docker, CI/CD

SmartQ - Internal Search Service

Improved answer quality from 60% to 80% and reduced response wait time from 5 minutes to 1 minute with production backend integration and service optimization.
Tech: Java, Spring Boot, OpenAI API, LangChain

EDUCATION

Loopers Backend Course - Training2025.07 - 2025.10

Designed and implemented a mock e-commerce platform with Spring Boot and focused on practical architecture trade-offs.

CERTIFICATIONS

No formal certifications listed.

SKILLS

Languages: Java, PythonBackend: Spring Boot, REST APIOperations: Linux, Docker, GitLab CI/CD, Airflow

Data: MySQL, Postgres, Redis, ElasticsearchSecurity: JWT, OAuth2Testing: JUnit5, Mockito
